Potential Impacts of Additional Biomass Power Procurement on Achievement of CCE Program Targets

Presentation for RCEA Board of Directors
November 2017
Topics

• Review of key CCE targets set by Board in Sept. 2016 and progress to date
• Review of CCE program headroom for 2017
• Projection of 2018 program headroom
• Discussion of potential impact of additional biomass power procurement on program headroom
Review of Key Targets: Overview

- Financial performance
- Power objectives
- Existing renewables
- New solar
- New other renewables
- Customer programs
Review of Key Targets: Financial

• Rate savings at least $2M per year – set generation rates 2.7% below PG&E’s across the board. Projected 2017 customer rate savings exceed $1M.

• Reserves of $35M in first five years (at least $10M under “adverse market conditions”) – on track to achieve over $5M in reserves for first 8 months of operation (May-Dec 2017)
Review of Key Targets: Power Objectives

- At least 5% more renewables than PG&E mix – surpassed with 42% renewables for 2017, vs 33% for PG&E in 2016 (PG&E’s 2017 portfolio not yet reported)
- GHG emissions at least 5% lower than PG&E’s – with 80%+ fossil-fuel-free power content overall, this target is expected to be surpassed in 2017
Review of Key Targets: Existing Renewables

• Biomass target “around 20 MW...about 15% of total RCEA power portfolio” – HRC contract for 5 MW fixed-rate contract plus additional generation at day-ahead pricing expected to result in 12% local biomass in 2017 portfolio; expected to hit 15% target in 2018 assuming some over-generation as in 2017

• Existing small hydro target of 2 MW – no procurement to date
Review of Key Targets:
New Local Solar Power

- Feed-in tariff – projected at $80-$100/MWh, portfolio allocation of 6 MW – not developed yet; City of Arcata and others have expressed interest

- Utility-scale solar: 5 MW by 2018, 15 MW by year 5 (2022) – 2 MW EPIC project at ACV if funded; exploring additional project opportunities identified through solar request for information (solicitation still open)
Review of Key Targets:
New Other Renewables

• New local on-shore wind – RCEA plans to assess possibility for up to 50 MW on Bear River Ridge (revisit Shell project)
• New local small-scale hydroelectric – HSU study identified opportunities on Green Diamond property
• Offshore wind – MOU with Principle Power and moving forward with assessing feasibility for project off Humboldt Bay
• Wave energy – WaveConnect and CalWave studies identified local potential; currently on hold
Review of Key Targets: Customer Programs

• Enhanced solar net metering (retail rate + $0.01/kWh on net surplus generation) – program in place. As of November 2017, there are 1,018 participating accounts

• 100% renewable energy option – program in place, premium is $0.01/kWh. As of November 2017, 701 customers or 1.1% of RCEA customers are opted up

• Up to $1M/year for new programs – Staff is developing a proposal for a program to support developing solar for public agencies and critical facilities. RCEA will provide grant matching funds for the proposed ACV microgrid project, to be financed then recovered through power sales revenue
Looking ahead to 2018:
key takeaways from TEA’s model analysis

• All figures reported on accrual basis
  – Expected end of 2017 reserves will exceed $5 million

• Forecasted supply costs increased about $1.20/MWh since prior board meeting
  – Wholesale energy: ~$1.10
  – RA: ~$0.10

• Material change provision for HRC unlikely to trigger
  – 3% rate savings
  – $2 million additional reserves

• Financially difficult to add additional DG Fairhaven while continuing current program goals and HRC
  – Net DG Fairhaven annual costs are roughly $280,000/MW

• Stress-tested unexpected PCIA increase scenario resulted in an annual cost increase of over $1 million
  – Material change provision will not trigger
## Updated Headroom

### 2018 Headroom
From 10/16/17 Board Presentation

HRC Material Change Provision Test

HRC contract as part of a portfolio that meets minimal RPS requirements should not trigger a material change.

Minimally Compliant Portfolio includes: CPUC Mandated RPS (29% in 2018), no additional non-fossil fuel purchases, no biomass purchases.

Forecasted End of 2018 Reserves

Minimally Compliant Portfolio

HRC Net Cost

$2 Million Reserves

3% Rate Savings

Additional Reserves

Available Headroom

$1,675,374

HRC Net Cost

Minimally Compliant Portfolio

HRC Net Cost

$2 Million Reserves

2017 EOY F’cast Reserves Balance

Obligated Reserves Addition

Incremental Reserves Additions

End of 2018 Reserves Obligation
Allocation of Headroom

Continuation of 2017 Portfolio Goals (above RPS requirements)

Adjusted baseline includes: CPUC Mandated RPS (29% in 2018), no additional non-fossil fuel purchases, 5MW → 13.25MW biomass purchases

Adjusted Headroom includes HRC expenses

Forecasted End of 2018 Reserves

- Baseline Portfolio
- 3% Rate Savings
- 40% RPS
- 80% GHG Free
