Essential pieces of the microgrid puzzle

Please share with Board and CAC

Time to avail the County of the many assets awaiting an invitation, much like the one extended to TerraGen, only now to solar afficianados

All they need is the data that RCEA, Schatz and County Planning can provide, let the jobs emerge!

But policy direction is essential, as is attending conferences such as these if we are serious about solarizing Humboldt.

These are where the innovative enterprising experts are to be found and solicited, who understand entrepreneurial opportunities and financing. These folks are the ones who define “feasibility.”

The April Oregon Solar Conference in Portland,

The Energy Fair in Custer, Co in June, and

Solar Power International in September in Anaheim,

Humboldt could host one for distributed onsite solar arrays, including microgrids with Vehicle to Grid (V2G) capability.

Thank you, Ken
